

Itaca Solution

Corner crimping
machines for aluminium
doors/windows

The machine has two special operating heads equipped with masses in which the 2 knives are adjustable on all crimping positions. The knives move and are adjustable on the Y axis (along the profile), on the Z axis (top-bottom) and on the X axis (along the crimping direction). These conditions prevent the replacement of tools on the machine regardless of the different types of profiles. In this way, the times and costs of placing are reduced.
